IT'S NEVER TOO EARLY TO START A GOOD HABIT..

YOU WILL SAVE . . .

by developing the habit of doing business in growing APPOMATTOX

IT'S GOOD BUSINESS

It is certainly a truthful saying that it is never too early to save . . . and, likewise, it is never too late to save. The sooner this lesson is learned the better, and the longer it is practiced the better.

Savings make possible the enjoyment of a high standard of living. A high standard of living built on insecure foundations is constantly in danger of collapsing, with resulting unhappiness and disaster. The best way to a solid future is to build your life around a thrifty habit of smart handling of your income and thoughtful buying, preserving a nestegg of saving for either emergency or for future plans.

Now, there are many ways to save. U. S. Savings Bonds are a wonderful investment. So are savings accounts in good banks, such as we have in Appomattox. Even the baby's saving bank, such as illustrated in the picture, is splendid, not only for the actual money saved, but for the habit instilled in youth.

But there are countless other ways to save, too.

We think one of the best ways to save is by doing business in Appomattox. It costs extra time and extra money to do business at a distance, often for the identical merchandise at approximately the same price. There is the saving to you of time and travel, and in this busy time, that is something to bear in mind as a real factor.

There is also the fact that you save when you support your home community. By supporting the business whose taxes sustain local government, local schools, local churches, local activities at every level, you are saving for the reason that if home-town business did not pay such a large part of the cost, your own taxes would be higher.

So you Save all around.

And to climax it all, he... business is able to serve yo... the best . . . best in service, b... merchandise, best in offers f... products, best in availability a... of need.

It's never too young t... Now is the time to join wit... building a strong community ... with good jobs, with good h... services, and with good co... life.

Washington Notes

Douglas Gets Bomber Pact
The Navy has awarded a $17,655,000 contract to Douglas Aircraft Corporation, Santa Monica, Calif., for continued production of A-3D twin jet heavy attack bombers.

U. S. Scholarship Plan
A House Education sub -committee has agreed on a multimillion-dollar program of Federal aid to education, including scholarships and student loans.

The plan is a compromise between the recommendations of the Administration and a rival program suggested by Representative Carl Elliott, Democrat of Alabama. It is subject to action by the full Education Committee before going to the House.

Army Form, New Unit
The Army has formally announced the organization of a force of more than 15,000 paratroopers and infantrymen to deal with limited war situations "anywhere in the world."

The announcement was specially timed against the background of the recent United States military movements in the Caribbean, the Mediterranean and Europe.

Rejects Change in Policy
Secretary of State Dulles says that despite the recent cloudburst of international trouble he believes there is no need for a basic change in United States foreign policy.

The United States position must be adaptable and flexible, he says.

Industry For South
The Army has announced that a multimillion dollar contract awarded to Western Electric Company for Nike-Hercules air defense missiles would be performed at the company's plants at Charlotte, Winston-Salem and Greensboro, N. C. An earlier report said the work in the $47,965,640 contract would be carried out at plants in Santa Monica, Calif., and Whippany, N. J.

Pornograph Bill
The House has passed a bill to tighten controls on mailing of pornography and increase maximum penalties for violators.

The bill would permit prosecution not only at the point of mailing, but also at point of delivery, or any point in between.

Present law provides a maximum penalty of a $5,000 fine and five years in jail. The new bill would double this for second and subsequent offenses.

Ike Says 'No'
President Eisenhower has taken a stand against any big tax cut as a way to attack the recession.

Furthermore, the President asked that Congress act to prevent cuts of three billion dollars in corporation and excise taxes due to take effect July 1.

Eisenhower's decision, announced by Press Secretary James C. Hagerty, climaxed months of speculation as to whether the administration would decide for or against general tax reduction.

Red Money Flows to U. S.
The Senate Internal Security subcommittee has gone on record as saying that an increasing amount of "Communist money" is being invested in American industries.

The sub-committee, in another chapter of its serialized annual report, said the funds from Communist sources are finding their way into the United States through Swiss banks and other intermediaries.

The report said, also, that American money flows behind the Iron Curtain through many channels, all benefiting the world Communist conspiracy.

QUESTIONS OF THE WEEK

(Editor's note: Here are the questions asked most frequently by Virginia farmers during the past week, as reported by county agricultural agents. Staff members at the VPI Agricultural Extension Service and/or Experiment Station supply the answers).

Q. How late can I plant corn and make a good crop?

A. Plant in time to harvest before frost. There are short-season varieties which will mature in about 90 days. Although they do not generally yield as well as the full-season varieties, they are satisfactory. Consult your county agent about varieties adapted to your area.

Q. Is there a vaccine which will prevent pneumonia in hogs?

O. No.

Q. What is a good insecticide to use in the garden?

A. Most garden insects can be controlled with rotenone or malathion. Refer to Circular 605, 'Timely Control of Garden Diseases and Insects,' for details. The circular is available free from county agents.

Q. How long should I wait after spraying forage crops for weevil control before I harvest?

A. At least seven days.

Q. If I spray alfalfa stubble for weevil control, will one application be enough?

A. You may have to spray twice.

Q. How serious an infestation of pine sawfly larvae would constitute a 'disaster' in an area?

A. A one-year infestation isn't too bad, but if damage continues for several consecutive years, you could be in trouble.

Q. A sooty-looking substance is in patches on the lawn. What is it, and will it do any harm?

A. It is commonly called 'slime mold,' and will appear after extended periods of hot, humid weather. It does no harm and will go away as soon as the soil dries up.

Q. What should I do to revive my tobacco which has been drowned?

A. If it's drowned, it's a goner. Better luck next time.

Q. How can I control cutworms and wireworms in my garden after setting out plants?

A. There isn't anything you can do about wireworms after the plants are set out. For cutworms, dust underneath and around the plants with a 20% toxaphene dust or 10% DDT dust.

Q. What is the best crop to seed now for fall hay?

A. Sudan grass or pearl millet. Include soybeans with either if you like.

Q. What are we going to plant in place of alfalfa? Chick weed and the weevil are causing trouble in this area?

A. We will probably continue to plant alfalfa (and spray for weed and insect control) since it is the longest-lived high-yielding legume.

Health and Beauty

If you are one of those people who suffer from tired or aching legs, you'd better see your doctor, for there is certainly a cause for it. It may be that your shoes do not fit properly, or your posture is bad, or the arches of your feet have fallen.

There is one very common cause for tired or aching legs, viz, varicose veins. Now, the arteries come out from the heart and carry oxygen and nourishment to every part of the body. They have no valves.

The veins gather the blood that has given up its oxygen and picked up carbon dioxide, conveying it back to the heart. Their walls are much thinner than those of the arteries, and they are furnished with valves to prevent the blood from flowing backward, and to keep it moving steadily onward, toward the lungs to be re-oxygenated, and then on to the heart, where it will resume its journey again through the arteries to every part of the body.

Some people are born with very poor veins. This condition is frequently hereditary. When veins are abnormally thin they easily become stretched — and engorged with blood. Thus some valves are destroyed and there is nothing to prevent stasis excepting the force of gravity which causes the blood to fall back into smaller branches of the veins.

The stagnation and engorgement of the veins by the slowly moving blood, destroy tha tissues gradually, instead of properly nourishing them. We call such veins varicose.

Just as a person is better off without a diseased tooth so he would fare better without his varicose veins. Such veins are useless.

How does the blood get back to the heart if the veins are too crippled to perform their functions?

Nature has provided a double set of veins in the legs. The ones that we have been talking about the superficial or surface veins. There is a deep set between the muscles of the legs. The contraction of the muscles squeezing against these veins keep the blood moving in the right direction so they do not become stretched and varicose.

These varicose veins are larger and tortuous. They cause aching in the legs after standing a short time. Usually the ankles swell toward evenings, but go down during the night. Sometimes as a result of neglected varicose veins, ulcers form on the legs, and unless the varicose veins are properly treated, they refuse to heal.

Tightly rolled stockings or garters restrict the circulation and have a tendency to cause varicose veins in those who are susceptible to the trouble.

A badly varicosed vein is not only useless, it is a menace to health and should be cured.

Appomattox is a growing town.
